

a.) Amendment to the Claims:

1. (Currently Amended) A display ~~device comprising~~ device,
comprising a surface-protective layer, an information display layer, a light-reflective resin
sheet ~~and a,~~ a substrate-adhesive layer, and an auxiliary substrate,

said display device being a number plate, said light-reflective resin sheet
being adhered to ~~an~~ said auxiliary substrate via said ~~substrate-adhesive~~ substrate-adhesive
layer, and said auxiliary substrate being adapted to be mechanically fixed on an installation
substrate,

said auxiliary substrate having a size larger than said display device,
wherein said display device ~~being~~ is installed on a front face of said auxiliary ~~substrate and~~
substrate, and said auxiliary substrate ~~being capable of~~ wrapping-up the ~~display device~~
substrate-adhesive layer,

wherein a specular reflective layer is ~~installed~~ installed in said light-
reflective resin sheet via a destructive layer, said specular reflective layer and said
installation substrate being adhered via the substrate-adhesive layer, such that (i) when said
display device is peeled off from the installation substrate, separation takes place at the
interface of the destructive layer and any one of the layers constituting the light-reflective
resin sheet which is in contact with the destructive layer, and/or by destruction of the
destructive layer, and (ii) the specular reflective layer remains on the installation substrate,

said destructive layer comprising cyclopentane resin according to formulae
1a, 1b or 1c, vinylcyclopentane resin according to formula 2a, vinylcyclopentanorbornene

resin according to formula 2b, cyclohexadiene resin according to formula 3a, cyclohexane resin according to formula 3b or methacrylic acid ester resin according to formula 4:

in which R^1 is hydrogen atom or cyclohexyl; R^2 and R^3 are independently hydrogen atom, methyl, cyano, methoxycarbonyl, ethoxycarbonyl, cyclohexyloxycarbonyl or n-butoxycarbonyl; and n stands for number-average degree of polymerization.

2. (Previously Presented) A display device as set forth in Claim 1, wherein the light-reflective resin sheet is a retroreflective sheeting layer comprising glass

beads and a specular reflective layer installed on the glass beads via said destructive layer and a focusing layer.

3. (Previously Presented) A display device as set forth in Claim 1, wherein the light-reflective resin sheet is a microprismatic retroreflective sheeting layer formed of microprisms with a specular reflective layer being installed on the reflective side faces of the microprisms.

Claims 4-6 (Cancelled).

7. (Previously Presented) A display device as set forth in any one of claims 1-3, comprising an active or passive **RFID** device equipped with a communication antenna installed on a back of the display device, which is a side opposite from said surface-protective layer.

8. (Previously Presented) A display device as set forth in Claim 7, wherein a zone of the specular reflective layer which overlaps with the communication antenna is removed.

9. (Previously Presented) A display device as set forth in Claim 8, wherein the specular reflective layer is installed within a portion of the light-reflective resin sheet to form said communication antenna, and when the display device is peeled off from the installation substrate, the specular reflective layer is broken and loses its antenna function.
